

AKG C451E

Condenser, cardioid.

Description:

The classic C451 introduced in 1969 with the choice of screw in replaceable capsules:

CK1 cardioid.

CK3 omnidirectional

CK22 omnidirectional

CK8 shotgun

Using an extremely light diaphragm, the new C 451 is almost totally insensitive to handling noise. An all-metal body provides excellent protection from RF interference and the microphone is rugged enough to give excellent results even under very harsh conditions.

Applications:

Great on acoustic guitar, hi-hat, overheads and general instrument use. Good for stereo recordings in pairs as well as choirs.
