

Audio Technica AE2500

Dynamic and condenser kick drum mic.

Description:

A revolutionary dual-element design with dynamic and back-electret condenser elements fitted into a single housing. Designed with kick drums in mind the elements are positioned in a perfect phase relationship, the dynamic delivering the aggressive attack and the condenser capturing the tonalities of the shell. The outputs are not combined and are available individually on an XLR-5M. The pad and HPF operate only on the condenser element.

Applications:

Kick drum and bass instruments.
