DBX 902 De-esser

The best de-esser I have tried.

The industry standard 902 de-esser's unique features make it possible to achieve the desired amount of de-essing, regardless of variations in signal level.

Using patented dbx sibilance detection circuitry, the 902 compares the RMS energy of signals above and below a specified crossover point to precisely detect undesirable sibilance.

- Gain reduction adjustable from 0 to -20dB
- Two gain reduction modes (Broadband and HF Only)
- No need to set a threshold for de-essing
- Two 902 modules may be strapped together for stereo operation
- Hardwire bypass switch
