

Electrovoice RE20

Dynamic, cardioid.

Description:

The Electro-Voice Model RE20 is a Dynamic professional quality dynamic cardioid microphone created specially for recording, broadcast, and sound reinforcement applications requiring essentially flat response over a very wide frequency range. The wide frequency response, coupled with excellent transient response, makes the RE20 easily comparable to the finest condenser cardioid microphones. However, the RE20 is virtually free of bass-boosting “proximity effect” when used close, because in design it is a Continuously Variable-D microphone. An easily operated “bass tilt down” switch corrects spectrum balance for use in long-reach situations, or other applications where bass attenuation is needed.

A true cardioid microphone, the RE20 offers greatest rejection at 180° off axis—directly to the rear of the microphone. Directional control is so effective that the frequency response is nearly independent of angular location of sound source, creating virtually no off-axis coloration yet providing greatest possible rejection of unwanted sounds.

Applications:

Warm full vocals, drums, bass instruments.
